

An entry begins with a verified problem.

SIH 2026 preparation · RV University · Six-person second-year B.Tech CSE team

SIH2171

Requested ID. Official title, theme and category remain unverified.

Before this becomes a pitch

Confirm statement identity

Confirm registered team details

Replace evidence slots

Make the problem measurable.

A population, a burden and a baseline — all three need sources.

EVIDENCE SLOT

WHO

Target audience
Geography and context
Source + date

EVIDENCE SLOT

WHAT IT COSTS

Time, money or access
Unit and denominator
Measurement method

EVIDENCE SLOT

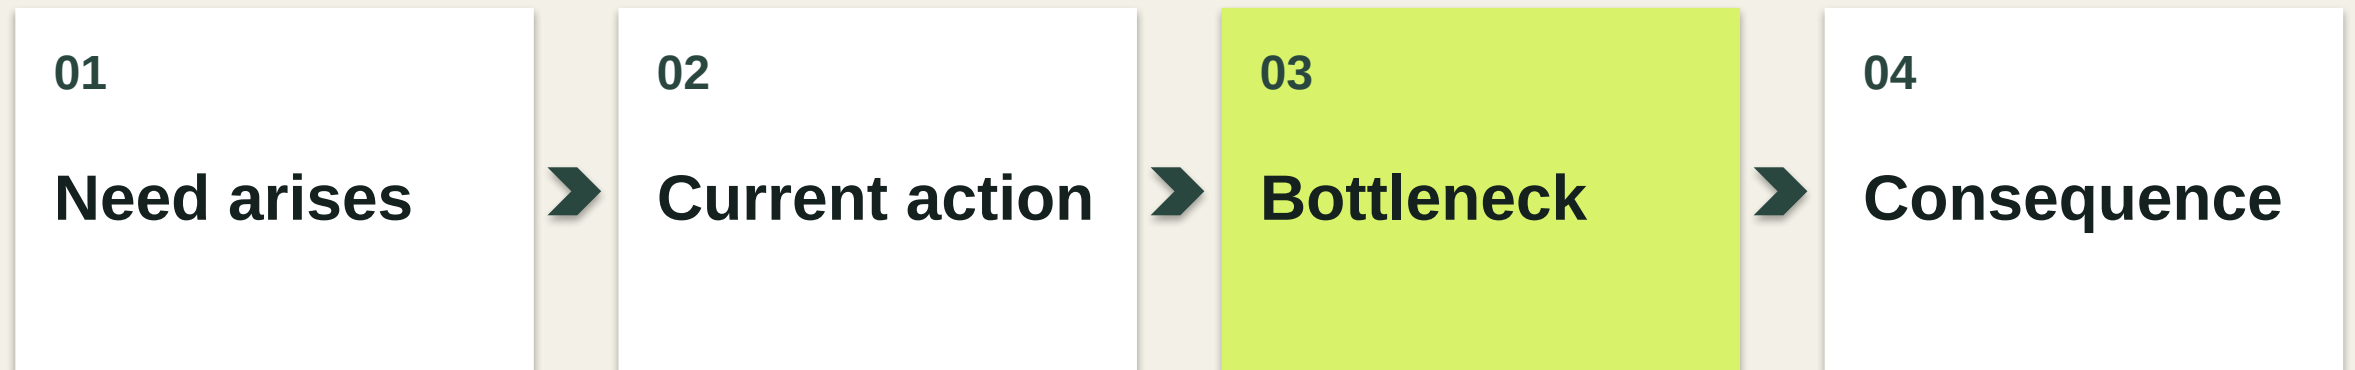

WHAT EXISTS

Present workflow
Baseline result
Known limitations

No domain statistic has been inserted. The problem must be verified first.

Locate the moment that breaks.

Map a real user journey before choosing a feature list.

Complete with an observed task, a source and the actual failure condition.

A gap needs a fair comparison.

Compare the same task under the same conditions; unknown is a valid result.

APPROACH	CORE TASK	LIMITATION	SOURCE
Existing tool A	Unverified	Unverified	Required
Existing tool B	Unverified	Unverified	Required
Proposed approach	Not defined	Not tested	Future evidence

Novelty claim: pending a sourced, domain-specific competitor review.

One promise. One mechanism.

Define the minimum complete solution after the problem identity is confirmed.

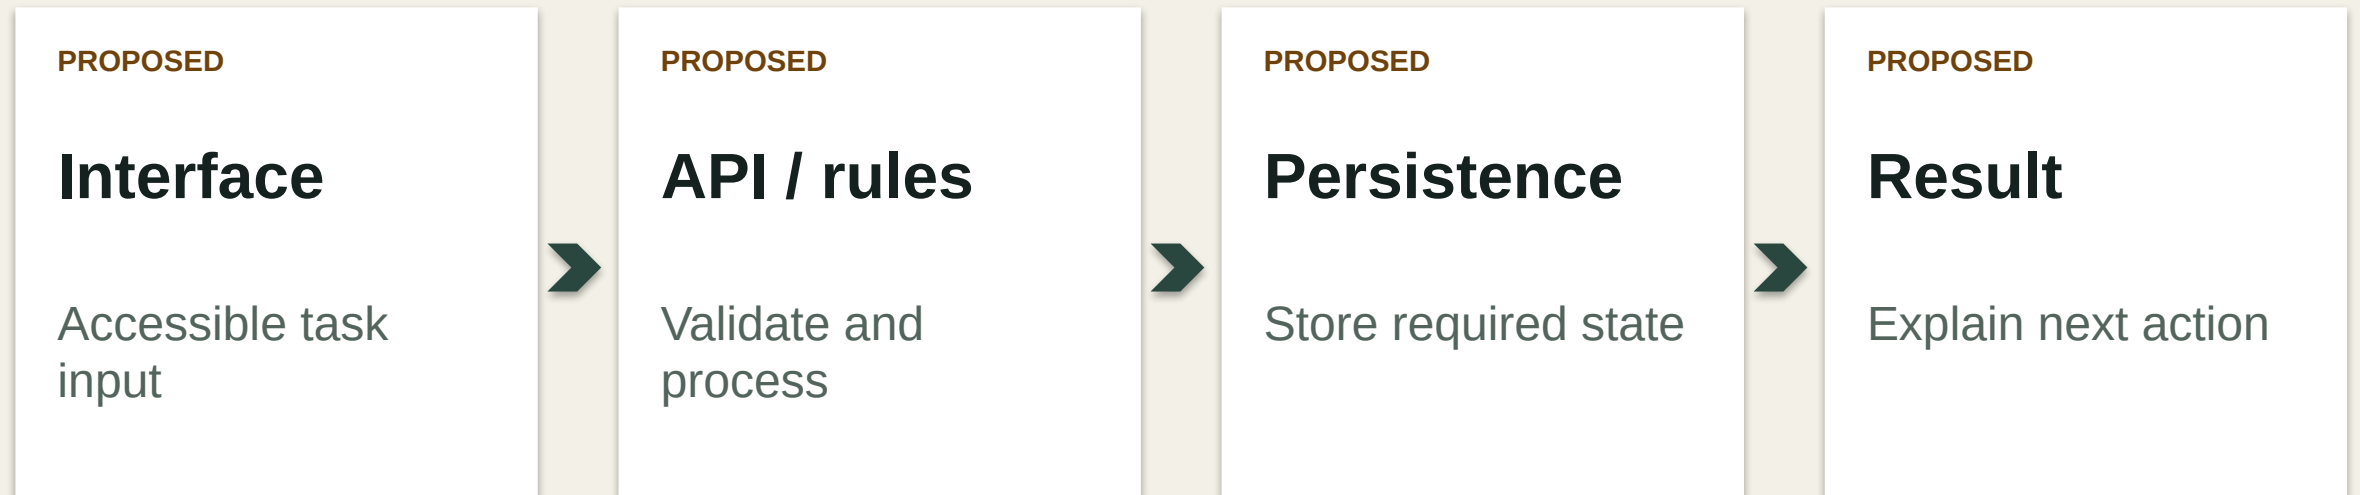

FOR [VERIFIED USER]

Enable [specific outcome]
through [testable mechanism].

Success condition → [measurable task result] Boundary → [explicit exclusion]

Show the path from input to action.

Illustrative architecture only. Every component below is proposed, not implemented.

Choose stack after domain review. Add trust boundaries, data rights and failure paths.

Demonstrate a complete task.

A screen is not evidence of a workflow. Capture the actual delivered build.

DEMO CAPTURE SLOT

**No prototype screenshot
or video available.**

Replace with a real workflow capture after functional validation.

- 01 Start from known data**
- 02 Complete the core action**
- 03 Verify stored result**
- 04 Explain the outcome**

Recovery is part of the product.

Plan one safe failure and prove the user can finish afterward.

TEST PLAN

Invalid input

Specific error
Values preserved

TEST PLAN

Service unavailable

Clear status
Retry or fallback

TEST PLAN

Return to task

No duplicate action
Consistent final state

Fallback ladder: live demo → recorded build → labeled screenshot storyboard

Publish the result, not the target.

Domain-product acceptance budgets. Preparation-site measurements are recorded separately.

Core flow response	< 200 ms	NOT MEASURED
Domain product website	> 90 each category	NOT BUILT
Accessibility	WCAG 2.1 AA review	NOT COMPLETE
Judge persuasion	No calibrated model	NOT ESTIMABLE

Make operation credible.

Prototype simplicity first. Scale and security claims need demonstrated limits.

REQUIRED EVIDENCE

Run it

Start / reset / restore
Known dataset
Deployment recipe

REQUIRED EVIDENCE

Protect it

Validate inputs
Least-privilege access
No exposed secrets

REQUIRED EVIDENCE

Bound it

Measured capacity
Dependency costs
Known failure limits

No production-readiness, capacity or cost-saving claim is established.

Six owners. Inspectable contributions.

Proposed work allocation only; experience and accepted commitments are not asserted.

Research + narrative

VERIFY → BUILD → TEST → REHEARSE / Internal target: 11 September 2026

Impact is an outcome, not a user count.

A pilot must connect adoption to a meaningful change in the verified domain.

Outcome change =

[baseline result] – [pilot result]

Same task. Comparable population. Defined time window.

Report uncertainty and unintended effects.

Design a pilot that can be sustained.

A proposed model needs a real adopter, realistic costs and a decision threshold.

UNVERIFIED

Adoption

Named user organization
Willing operator
Access and data rights

NOT CALCULATED

Economics

Unit operating cost
Support responsibility
Funding assumption

NOT DEFINED

Pilot decision

Outcome threshold
Risk review
Continue / revise / stop

Ground the work. Label the inference.

Historical competition evidence is useful preparation; domain validation is still missing.

01 Historical SIH criteria

Official 2024 indexed guideline; current applicability unverified.

02 Documented winner practice

Sponsor account: Solar Masters, 2024. Awards do not prove causality.

03 Domain + competitor sources

Required after SIH2171 identity is verified; no substitutes inserted.

Source URLs and retrieval limitations are in speaker notes and Raw/competition-sources.json.

Earn the next decision with evidence.

The completed entry should close on a bounded pilot ask. This blueprint cannot yet do that.

Verify SIH2171. Build the core task. Prove the result.

OPEN DEPENDENCIES

Official problem · Domain prototype · Measured validation · Team rehearsal
